                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        once, or longer because we arrange for a small overlap between neighbouring submissions.
The true left end of clone C48G7 is at 61761 in this sequence. The true right end of clone R08A2 is at 106 in this sequence. The start of this sequence (1. .106) overlaps with the end of sequence Z98833. The end of this sequence (61761. .61864) overlaps with the start of sequence Z78061.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /translation="MRRLGVDAPCGVLDPKETVLLDVSRDAFAFGGESTNNDRLTVEW TNNPDBAARQFRREGCGGBGMIRRRANSQLSTTHLRYKSVVPPLVFFFLSNKNSFT" join (4673. .4783,5619. .5699,5756. .5833,5909. .6094) /gene="oig-3"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

This sequence is not the entire insert of clone Y50EBA. It may be shorter because we only sequence overlapping sections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /trānslation="WNFIHYILLMSLSLSIVTARPPGRNDQEKKLTGGEPLELGDYV
